TOP FEATURES

Motion Sensor Technology
KECK APEX G11 Red Dot features motion sensor technology that automatically activates when movement is detected and deactivates the illuminated reticle after five minutes of inactivity.

Professional-Grade Red Dot Optical System

KECK Professional-Grade Red Dot Optical System offers unmatched light transmission that's designed to outperform in the most challenging lighting conditions, industry-leading glare reduction for a clear image in harsh, direct light, and the resolution and clarity that professional guides and shooters demand in the field.

WATERPROOF Solar Fail-Safe Technology

Solar Fail-Safe Technology is an innovative feature in KECK optics equipped with solar power. Even if the battery fails, you still have a backup power source with natural or artificial light. This technology activates in automatic mode, where the reticle brightness adjusts automatically based on the amount of light received: brighter in strong light conditions and dimmer in low light, adapting to various lighting environments. Models equipped with a supercapacitor remain charged through this system, allowing the optics to operate indefinitely during both day and night without the need for a battery.
